1. What's the complete name of the course?

**CS 435 : Advanced data structures and algorithm design**

2. Who takes this course?

Any student who has completely satisfied the course prerequisites (see q.3 or Handout 1). It is also implicitly assumed that you take courses in order i.e. sophomore before junior or senior courses and thus have the (computer-science) maturity level to attend CS 435. Students must have completed CS 241. In order to be able to complete the programming component of the course you need to have knowledge equivalent to CS 288, a listed prerequisite. You will not be taught programming, debugging, or how to use a compiler in this course.

3. How important are the prerequisites CS 241 and CS 288?

The listed prerequisite list is extremely important. If you barely made it through CS 241, CS 435 might look challenging unless you review CS 241 topics in the first few weeks of classes. The first 3 weeks of the course introduce mathematical tools for analyzing the performance of algorithms, and your CS 241 background MUST be current. We offer some very limited assistance in the form of few discrete math-related handouts.

4. Course Web access? Problems? What do I do?

The course Web-page is described in Handout 1 to follow. If the prefix http://www.cs.njit.edu does not work for the URLs in the handouts to follow, then replace that prefix with http://web.njit.edu, or http://cs.njit.edu, otherwise there is a serious NJIT computing services problem.

5. Course email?

You are encouraged to contact us by email if you cannot drop by during office hours. The instructor’s email is alexg+cs435@njit.edu. There is a plus between the words alexg and cs435. Do not try to improvise or change case. If you plan to send an email to the instructor or the TA (aka assistant or grader whose information will be provided in due time on the course web-page under Course Information) make sure that you specify in the Subject line the course number. Thus a cs435 is required in the Subject line! (No spaces between the cs and the 435.) If you receive an email from us and you want to reply to that email, DO NOT USE your mailer’s reply button or option. Send a NEW email.

6. Protected Area of the course web-page? Passwords?

Learn how to navigate around the course web-page. In order to access the protected area, section C of the web-page, you must type in a login name and a password. There is no Oh! in the password, it is a zero! The password and login name are both case sensitive.

```
Login : cs435 (alg435 also works)
Password: (only in the hardcopy)
```

7. How do I use the available course notes?

The notes Section C6 of the protected area are summaries of the material we cover in class. THEY DO NOT SUBSTITUTE FOR THE TEXTBOOK. DO NOT RELY SOLELY ON THEM. Homeworks and exams draw from the material of the textbook. The midterm and the final are open textbook; you will not be able to bring the notes. It is thus imperative that you know how to navigate around the textbook. The symbol on the right (black-box) indicates the end of this document.
