Abstract: The world of Cyber is littered with different types of jobs, companies, and sizes of companies. How do you navigate these factors for your job choices and career goals? This talk looks at the life of a cyber security engineer in today's market, from evaluating a company and succeeding in an interview to what the daily life of a Penetration Tester and how they are positioned in an organization.

Bio: Arthur Hinds has been working in the cyber security industry for the past 10 years after graduating from NJIT. He began his professional career in software development and private contracting. He moved into security consulting at a boutique consulting firm where he worked with fortune 100 clients conducting many types of security assessments and supported programs as a trusted advisor. He later joined a Big 4 consultancy and led maturity modeling for security program transformations. He now leads penetration testing at a global financial.
